

Careers at Abbey Machinery

ABBHEY
MACHINERY
since 1947

Roles:

Grow your career with a variety of opportunities at Abbey Machinery. Abbey are currently recruiting for general operatives, OEM apprenticeships, welders and NPI Design Engineers among other roles. We are looking for enthusiastic, self-starters to join our global team.

Benefits:

Roles at Abbey come with huge opportunity for career growth, continuous education and accredited certifications. Also offered:

- On the job training
- Accredited ETB apprenticeships
- Employer matched pension plans
- Employee assistance program

Life at Abbey:

- Opportunity to learn on the newest technology in original equipment manufacturing
- Support a global team with substantial growth plan in a state of the art facility
- Balanced hours and positive working environment
- Quarterly social events and charitable fundraisers
- Sustainably driven company mission

When I came to Abbey my first role was as an R&D tech. 60% of the role was on the floor and 40% in the office. I moved to Final Assembly working with the complete product range. In Final Assembly every day was different and we were working all of the different components. We could work on feeders one day and slurry tanks the next giving great variety to the role. In April a mechanical engineer role came up and I was able to apply internally and grow further in the company.—David, Mechanical Engineer

I came into Abbey as a Welder and cross trained in other areas allowing me to grow into the team lead role for the machine shop. At Abbey it is a great work life balance and the hours really suit a family life. - Conor, Team Lead
